

Alishba Tabassum

Computer Science Student & Aspiring Web Developer

alishbatabassum0900@gmail.com | GitHub: github.com/alishbatabassum | WhatsApp: 0300 0841326

PROFILE

Computer Science student (BSCS, FUUAST) building responsive front-end interfaces with HTML5, CSS3, and JavaScript. Built an e-commerce website with a teammate and an OOP-based hotel management system as part of a team, with a focus on clean, mobile-first UI.

SKILLS

HTML5, CSS3, JavaScript, C++, Responsive Web Design, Object-Oriented Programming, UI/UX Fundamentals, Problem Solving

Currently learning: JavaScript DOM & ES6, Git/GitHub workflow, accessible responsive layouts

PROJECTS

Fatima Zahra Hijabs — E-commerce Website

Team project (2 members) · HTML5, CSS3

- Built a responsive 4-page e-commerce site (home, shop, about, contact) with a teammate, ensuring consistent layout across mobile and desktop screen sizes using mobile-first CSS
- Designed product cards with a color-selection feature and an image slider using HTML and CSS, improving product presentation and browsing experience
- Improved visual engagement by adding custom CSS animations across key pages, applying UI/UX fundamentals learned independently
- Collaborated with a teammate to divide layout and styling work, delivering a fully functional site end-to-end as a self-directed learning project outside coursework

Hotel Management System

Academic team project · C++, Object-Oriented Programming

- Developed core hotel operation modules (e.g. bookings, records management) by applying OOP principles — classes, inheritance, encapsulation — as part of a collaborative team project
- Strengthened system design and debugging skills by working through logic and structure with teammates in a shared C++ codebase
- Practiced real-world software collaboration by dividing tasks, reviewing logic together, and integrating individual components into one working system

To-Do List Application

Personal project · HTML5, CSS3, JavaScript

- Built a task management app supporting add, edit, complete, and delete actions, using vanilla JavaScript to handle DOM manipulation and event-driven logic
- Structured task state and rendering logic entirely in JavaScript, dynamically updating the DOM in real time as tasks are added or changed
- Designed a clean, responsive interface with CSS to keep the task list usable on both mobile and desktop screens

Personal Portfolio Website

Personal project · HTML5, CSS3, JavaScript

- Designed and built a responsive personal portfolio site to showcase projects, skills, and contact information to potential employers and clients
- Structured the site with reusable HTML/CSS components and mobile-first layout, ensuring consistent presentation across screen sizes
- Deployed the site as a live, shareable link, applying the same UI/UX and front-end fundamentals used across other projects

EDUCATION

BS in Computer Science (BSCS)

Federal Urdu University of Arts, Science & Technology (FUUAST) — currently in 4th semester

Coursework: Programming Fundamentals, Object-Oriented Programming, core CS concepts, alongside self-taught front-end web development.
